This one-session activity consists of a PAU selectividad text and the accompanying exercises following the Universidad de Castilla-La Mancha (UCLM) entrance exam model.

The text has not been used by the UCLM, but the topic, extension and level are similar to the actual exams and this one has been used by real students of 2º Bachillerato as further training and preparation for the exam.

When using it, bear in mind the structure and correction criteria followed by the UCLM, which justify the appearance of this model:

**PART I – READING COMPREHENSION:**

As said in the instructions, no marks are given for true/ false answers unless the answer is justified with evidence literally transcribed from the text. This electronic version will correct only the True / False answers, but it can’t check if the evidence to justify the answer is correct. So when the students check their answers they will be shown the correct parts of the text, so that they compare with their own.

**PART II (In the written exam, students must choose two of the three exercises)**

**A. EXPRESSING THE MAIN IDEAS:**

Because this is a free answer activity, the screen will offer a place to write their answers and then they must compare them with some model answers that will appear when they click on the check button.

**B. LEXICON:**

Here students must write the word from the text that matches the definitions given. Correction is automatic.

**C. PHONETICS:**

As in the previous exercise, the words written by the student will be corrected automatically.

**PART III – USE OF ENGLISH**

This is a rewriting exercise. We have tried to make acceptable all possible correct answers, so that in several cases several possibilities will be accepted.

**PART IV - COMPOSITION**

The students must choose one of the topics and write about it. When they finish, they can click on the button and e-mail the composition to the teacher for correction.
