HT

ML Slide Show Wizard

PowerToys para Windows XP son una serie de utilidades adicionales que añaden nuevas funcionalidades a este sistema operativo.

Entre estas utilidades tenemos **HTML Slide Show Wizard**.

HTML Slide Show Wizard te da la posibilidad de crear un ***pase de diapositivas en HTML*** que podrás

mostrar en tu página Web

.

El programa se descarga de la página:

The screenshot shows the Microsoft Internet Explorer browser window displaying the download page for Microsoft PowerToys for Windows XP. The address bar shows the URL: <http://www.microsoft.com/windowsxp/downloads/powertoys/xppowertoys.aspx>. The page title is "Microsoft PowerToys for Windows XP". The page content includes a sidebar with navigation links, a main section with a green plus icon and a CD icon, and a right sidebar with related links and download information.

Microsoft PowerToys for Windows XP
Updated: November 1, 2005

PowerToys add fun and functionality to the Windows experience. What are they? PowerToys are additional programs that developers work on after a product has been released.

Note: We take great care to ensure that PowerToys work as they should, but they are not part of Windows and are not supported by Microsoft. For this reason, Microsoft Technical Support is unable to answer questions about PowerToys. PowerToys are for Windows XP only.

Important

- If you installed PowerToys prior to April 23, 2002, you **must uninstall** your old PowerToys before installing the versions available here.
- PowerToys only work with U.S. English regional settings.

Current PowerToy options:

Color Control Panel Applet

Professional-level photographers and designers know that getting consistent, accurate color from file to screen to print and beyond is a requirement for great results. This new tool helps you manage Windows color settings in one place. [Download or learn more.](#)

SyncToy

With new sources of files coming from every direction (such as digital cameras, e-mail, cell phones, portable media players, camcorders, PDAs, and laptops), SyncToy can help you copy, move, and synchronize different directories. [Download or learn more.](#)

The screenshot shows the 'Slide Show Wizard' dialog box with the title 'Select options for your slide show.' The dialog is divided into two main sections. The left section contains input fields for 'Slide show name' (filled with 'Prueba Pase Diapositivas'), 'Author name (optional)' (filled with 'Arturo'), and 'Save in the following folder:' (filled with 'F:\Perfiles\Arturo\Mis documentos\My'). A 'Browse...' button is next to the folder field. Below these is a 'Picture size' section with a note: 'Your slide show will run better with smaller pictures. Select a size:'. It has four radio button options: '320x240 (smallest)', '640x480', '800x600' (which is selected), and 'Keep current picture size'. A checkbox 'Only resize pictures larger than the size selected' is checked. The right section is titled 'Slide show type' and features a preview window showing a slide of a beach scene. Below the preview are three radio button options: 'Simple', 'Advanced' (which is selected), and a 'Fullscreen' checkbox which is unchecked. At the bottom of the dialog are three buttons: '< Atrás', 'Siguiete >' (note the typo), and 'Cancelar'.

Por último, en la opción de tamaño y tipo seleccionamos tamaño y tipo Advanced y guardamos en la carpeta que queremos.

Una vez que hayamos visto el pase, damos al botón Finalizar.

Al finalizar el Slide Show Wizard, veremos que en la carpeta My Slide Shows (por defecto),
se ha creado una carpeta con el nombre de la presentación.
