Aprende a través de la primera entrega de este tutorial a instalar y configurar este gestor de cursos libre... **MOODLE**

1.- Introducción.

En este trabajo he tratado de llevar a cabo la evaluación de la plataforma Moodle.

Moodle es considerado como un sistema de gestión de cursos libre (course management system CMS) que ayuda a los educadores a crear comunidades de aprendizaje en línea.

Éste fue creado por Martin Dougiamas, quien era el administrador de WebCT en la Universidad Tecnológica de Curtin, y se basó en las ideas del constructivismo en pedagogía que afirman que el conocimiento se construye en la mente del estudiante en lugar de ser transmitido sin cambios a partir de libros o enseñanzas. Un profesor que opera desde este punto de vista crea un ambiente centrado en el estudiante que le ayuda a construir ese conocimiento con base en sus habilidades y conocimientos propios en lugar de simplemente publicar y transmitir la información que se considera que los estudiantes deben conocer.

La primera versión de la herramienta apareció el 20 de agosto de 2002 y, a partir de allí han aparecido nuevas versiones de forma regular. Hasta diciembre de 2006, la base de usuarios registrados incluye más de 19.000 sitios en todo el mundo y está traducido a más de 60 idiomas. El sitio más grande dice tener más de 170.000 estudiantes.

A continuación veremos la instalación de la plataforma Moodle en red y sus funciones a nivel docente y discente. En una primera parte analizaremos la instalación del servidor Wamp5_1.6.6. y a continuación el de la plataforma Moodle en nuestro servidor. En una segunda parte veremos los distintos pasos que debemos de seguir para elaborar un curso mediante la plataforma, conociendo todas sus posibilidades.

2.- Moodle.

2.1.- Instalación de Moodle en red

Primero tenemos que instalar un paquete php, msql y apache en nuestro ordenador. Para ello instalaremos un programa que nos lo instalará de forma global , como es el wamp5_1.6.6.. Pinchamos en el icono

Le damos a siguiente en la siguiente ventana

Escrito por Antonio José Moreno Viernes, 26 de Octubre de 2007 10:09

dejanos stacsiguiente porodestado a la ruta en la que queremos instalar el archivo, en este caso,

Escrito por Antonio José Moreno Viernes, 26 de Octubre de 2007 10:09

En la siguiente ventana, podemos auto-start, para que el servidor se nos active solo.

Esperamos que el proceso termine

Escrito por Antonio José Moreno Viernes, 26 de Octubre de 2007 10:09

Dejamos el nombre que viene por defecto, DocalhostD, y le damos a siguiente:

Escrito por Antonio José Moreno Viernes, 26 de Octubre de 2007 10:09

Unitizzano aterine jecutor Explorer, como navegador para hacer visible nuestro servidor wamp, y le
